INTRODUCTION

In line with our organizational goals, we understand the importance of a consistent, effective, and transparent communication model for achieving global success. Therefore, we have created a comprehensive Global Environmental Policy to communicate openly, transparently, and reliably with all our stakeholders. Within the scope of this policy, we outline our approaches to environmental protection in all our operations and processes in every geography we operate.

1. PURPOSE

This policy defines our Company's approach and fundamental principles for the protection and improvement of the environment in our strategy, operations, investments, and business processes within the scope of our sustainability goal.

With this policy, we aim to establish an environmental management system in compliance with the United Nations Sustainable Development Goals, the UN Global Compact, IFC and ESG.

2. SCOPE

This policy covers managers and employees in all of our operating countries.

3. BASIC PRINCIPLES

- We consider the protection of nature and the environment as an integral and crucial element of our mission to “produce reliable, sustainable, and value-adding energy solutions.”
- We view sustainability and environmental improvement as a significant driving force in achieving our vision.
- We establish and effectively implement an environmental management system compliant with the United Nations Sustainable Development Goals, the UN Global Compact, ESG, IFC, national and international environmental regulations and standards, and best practices.
- We invest in and develop solutions in clean and renewable energy, energy efficiency, innovative energy technologies, and smart grids to contribute to sustainable development goals, support the global energy transition and combat climate change.
- We respect people and the environment. Leaving a clean and healthy environment for future generations is a fundamental priority.

- We take a proactive approach to environmental protection. We make environmental awareness a part of our corporate culture.
- We ensure the efficient use of natural resources in all our processes.
- We respond to the environmental protection expectations of our stakeholders and support transparency with our business model and practices that respect nature, biodiversity, historical and artistic heritage.
- We protect habitats, endangered species, and endemic species, as well as all species, in the areas where we operate, and manage the impacts on biodiversity in a sustainable manner.
- We adopt the principle of protection (prevention) and continuous improvement in environmental management.
- We integrate the principle of environmental protection and improvement into all our activities and processes.
- We regularly evaluate the environmental impacts that our activities may cause.
- We apply a sequential approach to managing the environmental impacts of our activities, starting from the investment phase and covering the operation and post-operation phases, by completely preventing, minimizing, repairing and/or compensating for potential environmental damage.
- We expect our business partners and other stakeholders to respect the environment and contribute to its protection, and support the creation of environmental awareness.
- We expect our suppliers to establish environmental management systems in accordance with national and international regulations, sustainable development and circular economy principles, to improve their environmental performance, and to commit to continuous improvement and environmental protection.
- We monitor greenhouse gas emissions, calculate our carbon footprint, and implement mitigating measures within a life cycle approach in our services and investments.
- To ensure the sustainable use of natural resources, we ensure the rational and sustainable use of water in our operations, manage water scarcity risks, and ensure the return of used water to the environment.
- To support environmental sustainability, we establish waste management systems and processes in full compliance with national and international regulations.
- We minimize waste generation and encourage recycling. To comply with the Zero Waste principle, we ensure the recycling of recyclable materials and minimize the impact of waste on nature.
- We implement regular training programs to inform and instill environmental awareness in all our employees.

- We periodically report transparently on progress regarding our approach, policies, and practices aimed at protecting and improving the environment.
- We regularly monitor and improve our environmental performance; communicate this policy to all employees and make it accessible to relevant parties.
